

PACCHETTO

Belt driven pleated patio system

(Industry Award Winning Awning ACASPA 2004)

The **Pacchetto** belt driven pleated patio system is the ideal solution for creating extra useable space, whether this be for restaurants, clubs, hotels, or at home. The **Pacchetto** system derives much of its functionality from the excellence in engineering with the very clever use of the Kevlar fabricated drive belts to move the awning from the fully closed position to being fully open, or somewhere in between. The **Pacchetto** offers the choice of manual operation, or for larger awnings a motor with remote control is the preference of most customers.

When fully retracted, the pleats simply fold away to minimize the storage space. The retractable nature of the **Pacchetto** offers year round options to provide sun screening in summer, or weather protection during the winter months. The **Pacchetto** cross-bars have been specifically designed to allow water to drain to either side of the awning. With greater fall, the water can drain over the front of the awning, if that is the requirement. The pleats of the **Pacchetto** can be made to suit individual size requirements, offering the best possible solution for all applications.

The **Pacchetto** has a powdercoated aluminium structure and is extruded to ensure maximum strength and durability. The **Pacchetto** can be manufactured in a wide range of sizes, from widths as little as 3 metres, to larger **Pacchetto** models up to 18 metres wide. The *standard* projection can be as much as 6 metres, but larger projections are available, provided the awning is top fixed. The elegant front posts complete the awning, and where required, offer the optional fitment of clear PVC screens, to enclose the front of the awning.

The **Pacchetto** awning offers full versatility, with a range of fabric options including acrylic, PVC coated fabrics or screen mesh (just to name a few). Your choice of fabric will ensure the right covering is available to suit your needs. The **Pacchetto** offers individual pleats of fabric, and should any damage occur, only the damaged pleat needs to be replaced - a real saving for the future. With a wide open space feel to **Pacchetto** it offers a solution to space utilization, not found with other systems where posts etc clutter the available area.
